

Project Deviation List

Original Scope/Ideal	Final Implementation
The application should be able to have a message feature between two online users	The feature was later removed as team faced difficulty in timely delivery and technical requirement
The application should send an email to the user whenever there is a change to the schedule/a user requests a shift to his or her manager	One of the teammate was unable to deliver the requested feature, the application will now update the schedule dynamically on the website and the users must manually check them
The application should allow users to update their password	The feature was later removed as team had to focus on more urgent tasks
The application notification should be more dynamic, include more information. Every employee should be able to get notified when managers create unassigned shifts or update their information, manager should get a notification when employees request a shift change	Due to team's incomplete delivery, the feature is rather basic. Employees only get a notification when managers modify their schedule, this notification will disappear which they can't see it again
Employees should be able to request an unassigned shift created by the manager	Employee can only view unassigned shifts but unable to request the shift, manager can create unassigned shifts but must manually updates for his employees
Manager should be able to create unassigned shifts for a specific category of employees	Due to technical difficulty, this feature was later scrambled
